Stroller Installation

Unpack and assemble by holding the handlebar and pushing it upward until you hear a "click" for locking. To open, push the handlebars forward without dissecting the folding joints.

Use the box pull rod to lift and extend (A), then push down on the retractable pull rod in the (B) direction for telescopic adjustment.

As shown in image push the wheel shaft for installation. When disassembling, remove the K plastic film and pull J apart simultaneously to complete.

When not in use, step on brake lever (N) to secure the platform. Use hook brake lever (M) when pushing. Release brakes to disengage.

As shown in image move the canopy forward in the arrow direction to open it; conversely, fold it back.

To adjust the back, hold the adjustment belt with one hand and press the button up or down with the other hand to achieve the desired angle for the baby's comfort.

After confirming wheel assembly and locking safety devices, push to ensure stability before use. Place baby's arms into left and right seatbelts (as shown), insert both sides into straddling safety buttons, ensuring they cannot be pulled off.

Warning:
For the safety of the baby, please use the seat belt at any time. Please put the straddle between the legs of the baby.

When not in use, press the fold button with the thumb on locks D and use the four fingers to press button E until the frame is completely closed.

When closing the frame, listen for the click to activate the platform lock. To open the platform, press the two locks (D) first and then open slowly.

Warning:
For the safety of the baby, when the stroller does not move, the wheels must be braked to avoid the danger of sliding
